Change a Test by Asking

Maintain a test in conversation, and leave the reasoning behind for whoever reads it next.

Before you start

> The tests from Labs 1 and 2.

Lab tasks

1. Add coverage by asking for it.

   ```
   Add a step at the end that verifies the product page shows the price $966.00.
   ```

2. Make one request that touches several steps at once.

   ```
   Change this test to use the Boltas 1.5 Ton 5 Star Split AC instead, and update the price check to $965.00.
   ```

3. Ask it to account for itself.

   ```
   Which steps did you change, and why?
   ```

4. Undo it.

   ```
   Revert that - put the Boltas 2 Ton 3 Star Split AC back and restore the $966.00 check.
   ```

5. Re-run the test. A change you have not seen pass is only a hypothesis.

Checkpoint

You have finished when:

- ☐ You changed a test without opening a step editor or touching a selector.
- ☐ The test still passes.
- ☐ The conversation records what changed and why.

Stretch challenges

- Ask it to split the test in two.
- Ask it to rename the test to describe what it proves.
- Ask what a specific sub-step actually does.

Notes
